

CARE AND CLEANING

IN GENERAL

SFI's products require minimal care to maintain their original beauty.

Avoid exposure to strong chemicals. If strong chemicals/cleaners containing methylene chloride, acetone (nail polish remover), or acid drain cleaners come in contact with your vanity top or bowl, quickly flush surface with plenty of soapy, warm water.

Even though all surfaces are non-porous, use of hair dye has been known to stain light colored tops. Cleaners with bleach may counteract the stain, but **are not recommended for general cleaning.**

Tops with a MATTE FINISH

Tops with a matte finish can be cleaned with a damp cloth or sponge using general purpose cleaners.

The surface may need occasional polishing to maintain its appearance. This is especially true of dark colors. Recommended polish/cleaner is **SHINE**, available by contacting the dealer from whom you purchased your vanity top, or direct from the manufacturer, Protect All at 800-322-4491 and on line at: www.protectallshineplus.com You may also purchase similar products at your local home improvement store. Follow instructions carefully as build up of polish will cause tops to look dull.

Tops with a GLOSS FINISH

Tops with a gloss finish can be cleaned with a damp cloth or sponge using **non-abrasive** cleaners.

The surface may need occasional polishing to maintain the gloss appearance. Recommended polish/cleaner is **SHINE**, available by contacting the dealer from whom you purchased your vanity top, or direct from the manufacturer, Protect All at 800-322-4491 and on line at: www.protectallshineplus.com You may also purchase similar products at your local home improvement store. Follow instructions carefully as build up of polish will cause tops to look dull.
