

Repair Kit/Touch-Up Kit Contents

MSD sheets are enclosed for your safety and information, review before proceeding.

1. 4 Dixie cups
2. 6 small pieces of 280 grit sand paper
3. 3 tongue depressors
4. 6 latex gloves
5. Gel coat (color/paint)
6. Catalyst (clear liquid)

Repair Kit/Touch-Up Kit Instructions

Wear latex gloves at all times

1. Mix 4 to 5 drops of catalyst (clear liquid) to 1 tablespoon of gel coat (color/paint) in the Dixie cup provided. **Add the catalyst by drops, DO NOT** add too much.
2. Mix thoroughly with tongue depressor.
3. Apply to surface.
4. Let surface air dry, this will take about an hour. (The thicker or bigger the patch, the longer it will take.)
5. Allow the patch to dry thoroughly.
6. Sand the repaired area with wet 280 grit sandpaper.
7. If necessary, repeat process.

Disposal of excess gel coat and catalyst

Gel coat and catalyst need to be disposed of properly. To do so, add the remainder of the catalyst to the jar (or jars) of gel coat. Let harden, cover and dispose of as normal garbage.

If you have any questions about this process, please call Kelly or Julie at SFI. (608) 269-2706.
